

## A Person I Admire

By 6A Wong On Yin

The person I admire is Stephen Hawking. He was born in 1942 in England. The day he born was the centenary of the father of science, Galileo Galilei.

When Hawking was young, he was afflicted by the incurable disease, Amyotrophic lateral sclerosis (ALS). However, he never gave up, and he kept investigating the universe and physics. Finally, he proposed the 'hawking radiation' theory.

Hawking died in 2018 and his contributions to science influence many people today. He told us that we should not give up. We all need to learn from him.
